Day - 3

11 March 2026 19:38

Data Model:-

1. What?
2. How?
3. Which?

Problem:- index = VK -idx → (1) Data is huge

(2) Searching will take lot of time.

(3) Resources will be held by the Query

(4) Security | operational

Size↑ Urgency↑

↳ Quick update?

Mechanism:- index = VK -idx

(i) Search the list of events.

(ii) field extraction → O|P.

index = main

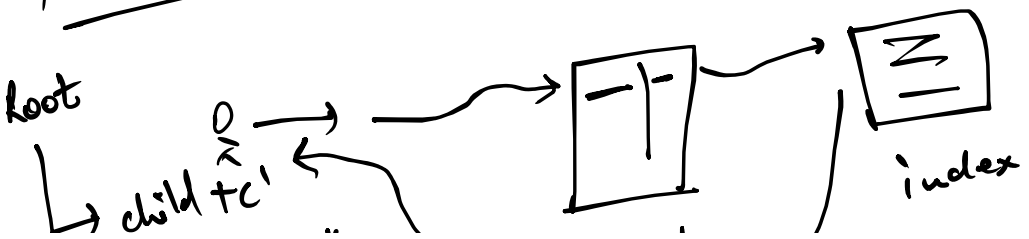
(1) CTS
(2) TN
(3) Sev.

Data model:-

(1) Define the req. field in Advance

(2.) .tsidx
↳ Timestamp summary file.

Hierarchal.



↳ child tc'
↳ sc tc''
↳ ssc tc'''

.tsidx

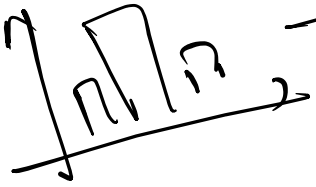
index

— ③ Pull the list of events.

Con :- ① Consume the computational resource.

Scenario :- ① Data Set is huge. ② Data is critical } → Security operational.

Pivot :- Visualize the data.



→ Pivot ↳ No Code is req.

No Pivot

Dashboard :-
→ classic Dashboard - XML
Feature driven.

→ Studio Dashboard - json
↓
Evolution.
Cosmetic fact

Classic Dashboard
→ Static → Fixed. (~~Vlog~~ Blog)
→ Dynamic → Flexible, End User Input flexibility
↓
Amazon, Orkut, Fb

Amazon, Orkut, FB

1. Create the Dashboard
2. Add Panel to the New Dashboard
3. Add Panel to the existing DB
4. feature of DB
5. Source code
6. Input filter.
7. Submit Button.
8. Permission.

Transaction:- Group related events into a single event based on shared field values and/or time constraint.
